RELEVANT SUBSTANCE:

Component	%
Imidacloprid (ISO), 1-[6-chloropyridin-3-ylmethyl]-N-nitroimidazolidin-2-ylidenamine	< 5

Reg. Nr. L10674, Wet Nr. 36 van 1947

'n Nie-vlugtige, nie-afweermiddel-gel-aas insekdoder vir die beheer van kakkerlakke in huishoudelike en voedselopbergingspersele, sowel as in openbare higiëne.

IRAC INSEKDOODER GROEP CODE 4A

Aktiewe bestanddeel: Imidakloprid (Nikotinoïed) 21.5g/kg

DIRECTIONS FOR USE Use only as indicated.

Suitable for use in commercial and industrial premises, warehouses, food handling and processing establishments, market places, restaurants, hotels, hospitals, barracks, ships, offices, store rooms, schools and homes, etc.

SHARDA ROACH GEL is a cockroach insecticide with delayed action; therefore the results will not be visible immediately. A noticeable effect on the cockroach population may only be observed within a week. The area to undergo treatment should be examined to identify the centres of the cockroach infestation. **SHARDA ROACH GEL** can then be applied by spot-treatment in places in and around cockroach harbourages and where cockroaches have been observed or where they hide. The gel should be applied in dark areas and well out of sight. **SHARDA ROACH GEL** is dispensed in an injection tube.

APPLICATIONS RATES: Bait application should consist of 0.25-0.5 g/spot and 10-20 spots/10 m². A spot of 3 mm in diameter is equal to approximately 0.25 g of bait whereas a spot of 6 mm in diameter equals approximately 0.5 g of bait. The lower application rate can be used for low and moderate infestations or re-treatments, while the higher rate can be used for more severe infestations or a primary treatment. Rapid control is provided by a number of small placements rather than less large spots. The gel will remain palatable and palatable to cockroaches as long as it is visible; usually for up to 20 weeks. If infestations are high, inspect the gel after 4 weeks of treatment and replenish if necessary. Daylight conditions will reduce the longevity of the bait. **SHARDA ROACH GEL** must not be contaminated with other insecticides or placed on freshly sprayed surfaces.
